

S. CRAFT

SWISS MADE

Transparency N°1
Technical specifications

About the watch

When we thought of the S.Craft (standing for Sapphire Craft) and designed the “Transparency N°1”, our goal was to construct the watch in such a way that the wearer could observe the movement parts and interactions with as unobstructed a view as possible.

Sapphire case

The timepiece features a solid sapphire 40mm case that has been carefully machined from a single block of sapphire crystal. The aim, of course, is to offer full visual access to the multi-level movement, from all possible angles.

Sapphire (known in mineralogical circles as Corundum) is the third hardest material on Earth, only moissanite (9.25) and diamonds (10) exceed its hardness ranking (9) on the Mohs scale.

It is almost entirely scratch-proof, and the process by which it is made into a finished watch case is extraordinarily difficult. For watchmakers, creating a case from a block of sapphire is a true technical challenge.

It requires long and complex machining, grinding and polishing processes and superior expertise.

Skeletonized movement

The eye-catching heart of this watch is the skeletonized self-winding ETA movement 2892-A2, which carries a power reserve of approximately 42hours and is beyond any doubts, one of the most reliable and trouble-free movements in the industry.

This movement beats at 28'800 BPH (beats per hour) 4Hz and it is decorated with blued steel screws. It has undergone extensive skeletonizing thus reducing the bridges and main plate to a minimal see-through framework.

The same goes for the rotor which is opened like the rest of the movement to allow a clear view of the wheels and pinions interacting.

Dial & band

The movement seats beneath the skeletonized dial displaying the hours with blue indexes and the minutes with blue markers

The band is purposely not made using any endangered or exotic species but rather using top grain cowhide leather with crocodile pattern embossing.

The band also features “quick-click” spring bars so the band can be easily changed (a second band color is available in the gift box with each watch).

Gift box

The S.Craft “Transparency N°1” is delivered in a gift box with a second band and a magnifying glass allowing the owner to better see all the details of the skeletonized movement from any angle.

Kickstarter campaign

One of the greatest appeal of the S. Craft “Transparency N°1” will be its price, when compared to the other Swiss Made sapphire case watches on the market.

During the month of April we will effectively be launching a Kickstarter campaign which will feature the S. Craft “Transparency N°1” at half its purposed retail value as a reward for the first 20 buyers.

Then prices will increase when accessing each new level of sales, while still being far lower than the final retail value of watch.

Don't hesitate to subscribe to our newsletter to be informed when the Kickstarter Campaign kicks off.

Technical specification

CASE

- Diameter: 40 mm
- Material: scratch-resistant polished sapphire crystal
- Middle part case: scratch-resistant polished sapphire crystal
- Bezel: scratch-resistant polished sapphire crystal
- Back cover: scratch-resistant polished sapphire crystal
- Waterproofness: 30 meters (100 feet), 3ATM

MOVEMENT

- Caliber ETA 2892-A2 Skeletonized mechanical movement with self-winding bidirectional rotor
- Time setting with stop-second
- Frequency 28'800 vibrations per hour (4 Hz), 21 jewels, shock absorber incabloc
- Regulator system ETACHRON
- Functions hours, minutes and central second.
- Typical power reserve of approximately 50 hours

DIAL

- Skeletonized silver color with brushed finishing
- Blue hour indexes with blue minute markers
- Blue Hands

BAND

- Top grain cowhide leather with crocodile pattern embossing
- Tool-free “quick-click” spring bars
- Stainless steel prong buckle

International guarantee of 5 years

About us

We're The Solutions Sàrl, a Swiss company located in La Chaux-de-Fonds and specialized in any services related to the watch industry.

We're a team with more than 35 years of experience bringing together all the Swiss watchmaking know-how and covering all the other aspects related to it.

What we do

Starting from a blank sheet, we create, develop, manufacture and assemble, at the request of our customers, their new watch projects while guaranteeing them the utmost discretion.

These projects have allowed us to use and experiment all possible materials for the manufacture of the watch cases and components using both quartz and mechanical movements.

These projects have also allowed us to create products for mass distribution as well as unique pieces or limited editions which, if necessary, can be set with precious stones in which, in their hearts, we generally use rare movements with grand complications.
